

Paving

What to expect prior to completion of project.

1. Customer will be contacted by scheduler or salesperson prior to start of project. In general we are scheduling 4-6 weeks depending on weather unless something different has been set up with you.
2. Once scheduled, customer should contact anyone who may need access to the driveway (friends, family, etc) and let them know that the driveway will be unavailable for use.
3. Completion of project is weather dependent and if rain or cold temperatures are in the forecast Huyser Asphalt will contact customer to reschedule to a later date. Please keep in mind that in most cases rescheduled work does not happen the next day that weather allows, instead it will be pushed back to next available day that other jobs are not already scheduled.
4. Customers should have any vehicles they need out of garage/driveway area prior to start of work.
5. Huyser Asphalt is responsible for calling MISS DIG for all underground public utilities.
6. Customer should mark any privately owned utilities/lines before we arrive onsite. These include, but are not limited to: electrical lines, sprinkler/irrigation lines, gate heights, sewer lines, dog wires, etc. Huyser asphalt is not responsible for damage to anything that is unmarked.

What to expect during and after completion of project.

1. Huyser Asphalt will do it's best not to damage any landscaping, but due the nature of removing/replacing asphalt some damage to grass/landscaping may occur. Any overgrowth of landscaping will need to be removed prior to paving. Huyser Asphalt is not responsible for damage to landscaping/grass within 2 feet of asphalt edges. This includes, but are not limited to: general damage to landscaping and tire marks/indents from equipment/trucks. In addition, Huyser Asphalt is not responsible to backfill edges of asphalt with topsoil.
2. Huyser Asphalt will rope/flag off driveway upon completion of work.
3. Customer can remove rope/flags and start using driveway after 48 hours of drying time, or timeframe given by salesperson or paving foreman. Customer may throw away rope/stakes. If any cones are left on site, Huyser Asphalt will pick them up after 48 hrs.
4. During hot weather the top layer of asphalt may stay soft for several days after paving causing customer to see tires marks and small indents. Customer should try to continue moving while turning on new asphalt. Sitting in place and turning the tires may cause small indents. Tire marks and small indents generally wear in after a few months. On extremely hot days try not to leave your vehicle on the freshly paved driveway.
5. Water is not guaranteed to flow on existing overlaid asphalt. We will try our best to make the water run off the asphalt.
